

Secure your information, **so people can work with confidence**

Data is everywhere and protecting it is becoming more difficult than ever. Titus enables you to establish a policy-driven foundation that helps you identify and classify sensitive data at creation, in motion, or at rest and apply the right security policy to protect it.

by HelpSystems

Identify

Scan and identify information at creation, at rest and in motion with configurable data identification and intelligent content analysis powered by machine learning

Classify

Help users make better security decisions when creating, handling or sharing information with visible markings, policy alerts, and selection tips embedded into the productivity apps already in use.

Protect

Reduce risk and increase confidence with a configurable policy management platform where you decide the rules and the tools your policies control.

Data protection that works.

Put your information security policies at the center of your data protection strategy with the industry's most powerful, flexible policy management platform - purpose built to identify, classify and secure unstructured data across your organization.

Use a powerful policy manager to create and control your policies from one central console

Tailor how classification is structured and what metadata is applied with a flexible schema design

Enhance the efficiency and accuracy of identification and classification of sensitive content with intelligent protection

Embed classification tools into productivity apps without disrupting the user workflow

Leverage cross-platform support to protect data wherever your users work

Unify your security program with policies that optimize DLP, CASB, DRM, and more

Report and measure the effectiveness of your security policies with detailed user activity logs

Improve data decisions by scanning and validating content in motion and at rest
